

Proxima Health — Weeks 2–3

Analytics Report

proxima.health | April 11–22, 2026

Site: proxima.health | **Period:** April 11–22, 2026 (12 days) | **Source:** Vercel Web Analytics

This is the follow-up to the April 10 Week 1 report. “Week 1” refers to April 7–10 (3.5 days of live traffic after external sharing began). “Weeks 2–3” covers the 12 days since.

Summary

Total Pageviews	Unique Visitors	Pages / Visitor	Avg Pageviews / Day
580	238	2.4	48

vs. Week 1

Metric	Week 1 (Apr 7–10)	Weeks 2–3 (Apr 11–22)	Change
Pageviews	439	580	+32% total
Pageviews / day	127	48	–62%
Unique visitors	143	238	+66% total
Visitors / day	41	20	–51%
Pages / visitor	3.1	2.4	–0.7

The post-launch spike has faded, as expected. Daily traffic settled to a quieter baseline, but the quality signals (SEO, engagement depth on key pages) tell a more interesting story — see below.

Daily Traffic

Date	Pageviews	Unique Visitors
Sat, Apr 11	45	21
Sun, Apr 12	20	6
Mon, Apr 13	55	22
Tue, Apr 14	52	29
Wed, Apr 15	90	30
Thu, Apr 16	74	29
Fri, Apr 17	20	14
Sat, Apr 18	29	14
Sun, Apr 19	17	14
Mon, Apr 20	47	16
Tue, Apr 21	62	20
Wed, Apr 22	69	23
Total	580	238

- **Weekday pattern is emerging.** Mid-week days (Tue–Thu) are consistently the strongest. Weekends drop sharply (Apr 12 and Apr 19 were the two lowest days).
- **Apr 15 peak (90 pv)** — the strongest single day in this window. Worth checking whether any outreach, newsletter, or share happened that day.
- **Traffic is ticking back up this week.** Apr 20–22 averaged 59 pv/day vs. the prior week’s 42 pv/day.

Top Pages

Page	Pageviews	Visitors	Bounce Rate
/ (Homepage)	246	185	74%

Page	Pageviews	Visitors	Bounce Rate
/science	67	41	49%
/interventions	59	40	63%
/about	57	42	77%
/diagnostics	57	46	76%
/practitioners	52	38	65%
/waitlist	24	21	80%
/terms	8	6	50%
/privacy	4	4	100%
/login	2	2	100%

Key observations

- **/science bounce rate improved from 66% → 49%** — the biggest page-level gain. Visitors are going deeper into the scientific evidence content. This is the strongest engagement signal in the report.
- **/about climbed to #4** (Week 1 it was #6). Visitors are researching who's behind the company, not just the product — consistent with a higher-intent, later-funnel audience.
- **/diagnostics bounce regressed (57% → 76%)**. The testing page was previously the best at driving further exploration; now it's among the worst. Worth a content review.
- **/interventions held up** — 63% bounce matches Week 1 exactly.
- **/waitlist received 24 pageviews** (vs. 17 in Week 1) — slightly more signups attempted.

Traffic Sources

Referrer	Pageviews	% of Total
Direct / No referrer	490	84%
google.com	59	10%
l.instagram.com	8	1%
t.co (Twitter/X)	6	1%

Referrer	Pageviews	% of Total
jotform.com	3	<1%
longjourney.vc	3	<1%
bing.com	2	<1%
search.yahoo.com	2	<1%
linkedin.com	1	<1%
chatgpt.com	1	<1%
lennysnewsletter.com	1	<1%
1299labs.com	1	<1%

Key observations

- **Google traffic grew 5.4x (11 → 59 pv).** This is the report's most important signal. SEO is working — the blog content is indexing and bringing in organic search. Worth pulling search console data next time to see which queries are driving it.
- **Direct share rose to 84%** (from 81%) — the site is still being passed around person-to-person more than it's being discovered.
- **Instagram appeared (8 pv).** Someone shared it on an Instagram story/post.
- **longjourney.vc (3 pv)** — a VC firm's site is linking to Proxima. Worth tracing.
- **ChatGPT referral** — someone asked ChatGPT and clicked through. First sign of LLM-driven discovery.
- **Thailand's big Week 1 share (32 pv / 7%) collapsed to 6 pv / 1%.** That was a one-off, not a real cohort.

Geographic Breakdown

Country	Pageviews	% of Total
United States	406	70%
Canada	38	7%
Germany	33	6%
Brazil	18	3%
India	14	2%

Country	Pageviews	% of Total
United Kingdom	13	2%
Italy	10	2%
Argentina	8	1%
Thailand	6	1%
Taiwan	6	1%
Switzerland	5	1%
Philippines	5	1%
Cambodia	4	1%
Australia	3	1%
Bangladesh	3	1%
Other (NL, SE, ID, RU, PA)	8	1%

Key observations

- **US share jumped from 32% → 70%.** Week 1 was geographically scattered (many one-off international visits from shares); Weeks 2–3 show the sustained audience is overwhelmingly US-based.
- **Switzerland dropped from 20% → 1%.** The Week 1 Swiss traffic (86 pv) was a specific share that hasn't repeated. Not a real cohort.
- **Canada at 7%** — now clearly the #2 market, which aligns with expansion plans.
- **20 countries still represented** — breadth remains wide, but depth is concentrating in North America.

Device & Technology

Device Type

Type	Pageviews	% of Total
Desktop	361	62%
Mobile	219	38%

Browser

Browser	Pageviews	% of Total
Chrome (Desktop)	275	47%
Mobile Safari	82	14%
Chrome Mobile iOS	65	11%
Chrome Mobile (Android)	33	6%
Microsoft Edge	33	6%
Safari (Desktop)	22	4%
Firefox	19	3%
Instagram In-App Browser	14	2%
Twitter In-App Browser	14	2%
Opera	12	2%
Google Search App	9	2%
Samsung / Brave	2	<1%

Operating System

OS	Pageviews	% of Total
macOS	211	36%
iOS	184	32%
Windows	128	22%
Android	35	6%
Linux	21	4%
Chrome OS	1	<1%

Key observations

- **Mobile share grew from 24% → 38%.** The audience is shifting more mobile — likely driven by social referrals (Instagram, Twitter) and the broader US consumer cohort.
- **In-app browsers appeared** (Instagram, Twitter, Google Search App). 37 pageviews / 6% of traffic is now coming through social app browsers. These users have the worst cookie/JS

environments — worth testing the quiz flow inside those browsers.

- **iOS + macOS = 68%.** Still a heavily Apple-skewed audience.
- **Opera collapsed from 11% → 2%** — consistent with the Swiss traffic disappearing.

Custom Event Tracking

Event	Count	Week 1	Change
scroll_depth	226	217	+4%
nav_clicked	168	192	−13%
quiz_question_answered	88	75	+17%
footer_link_clicked	57	29	+97%
cta_clicked	15	10	+50%
quiz_started	13	8	+63%
research_link_clicked	9	1	+800%
quiz_completed	8	7	+14%
quiz_email_submitted	5	3	+67%
stat_source_clicked	3	—	new
diagnostics_signup_submitted	2	3	−33%
quiz_email_skipped	2	3	−33%
practitioner_inquiry_submitted	2	—	new
quiz_question_back	1	2	−50%
quiz_why_we_ask_opened	1	1	flat

Funnel Analysis: Diagnostic Quiz

Stage	Weeks 2–3	Week 1
Quiz started	13	8
Quiz completed	8 (62%)	7 (87.5%)
Email submitted	5	3
Email skipped	2	3

Stage	Weeks 2–3	Week 1
Diagnostic signup	2	3

- **Quiz completion dropped from 87.5% → 62%.** This is the single biggest negative signal in the report. Five of thirteen quiz-starters abandoned mid-way. Worth looking at the per-question drop-off data (that tracking was added Apr 14) to see where they leak.
- **Email capture rate improved (50% → 71%).** Of the 7 post-quiz users, 5 submitted email. The post-quiz email prompt is working better than it did.
- **2 diagnostic signups + 2 practitioner inquiries** — 4 high-intent leads total, compared to 3 in the first 3.5 days. Lead rate is lower per day but holding up.
- **research_link_clicked 9×** (vs. 1 in Week 1). The new research-link click tracking (added Apr 22 per recent commits) is capturing what was previously invisible: visitors are clicking out to the source studies. Strong evidence-engagement signal.
- **New events fired:** `stat_source_clicked` (3), `practitioner_inquiry_submitted` (2) — both added recently.

Engagement Signals

- **226 scroll_depth events across 238 visitors** — nearly every visitor is reaching at least a 25% scroll milestone. No hero-bounce problem.
- **footer_link_clicked nearly doubled (29 → 57).** Visitors are reaching the bottom of pages and acting on footer links. Good signal for page depth.
- **cta_clicked 15 / 580 pageviews = 2.6%.** Essentially flat vs Week 1's 2.3%. CTA performance is the most stubborn metric — still worth testing.

Recommendations

1. **Investigate the Apr 15 spike.** 90 pv in one day — identify the source (email blast, share, newsletter) and repeat the pattern.
2. **Act on the quiz completion drop.** 62% vs 87.5% is a real regression. The per-question drop-off tracking now exists; pull it and find the abandonment question.
3. **Double down on SEO.** Google referrals 5× growth in 12 days is the strongest organic signal. Publish more blog posts in the

high-performing themes and pull Search Console data to see winning queries.

4. **Fix the /diagnostics bounce regression.** 57% → 76% suggests either a copy change, a UX regression, or an audience shift. Diff the page vs. the Week 1 snapshot and check.
5. **QA social in-app browsers.** 37 pageviews in Instagram/Twitter/Search-App in-app browsers. Validate the quiz and signup flow works in Instagram's embedded browser, which has the most cookie/JS restrictions.
6. **Follow the longjourney.vc referral.** A VC is linking to Proxima. Could be a warm intro opportunity or a mention worth reinforcing.
