

Proxima Health — April

Monthly Analytics Report

proxima.health | April 1–30, 2026

Site: proxima.health | **Period:** April 1–30, 2026 (full month) |
Source: Vercel Web Analytics

Full-month roll-up of April 2026. The site went live to external traffic on **April 7**, so the first six days of the month show zero traffic. All figures below reflect 24 days of live data.

Summary

Total Pageviews	Unique Visitors	Pages / Visitor	Avg Pageviews / Active Day
1,509	591	2.6	63

Phase comparison

Phase	Window	Days	Pageviews	Visitors	PV / day
Launch (Week 1)	Apr 7–10	4	443	146	111
Weeks 2–3	Apr 11– 22	12	584	238	49
Late April	Apr 23– 30	8	482	207	60
April total	Apr 7–30	24	1,509	591	63

The shape of the month is now clear: a launch spike on Apr 7–10 (peaking at 186 pv on Apr 8), a quiet middle, then a meaningful re-acceleration in the final week — driven by a single 157-pageview day on **Apr 27** (the strongest non-launch day of the month).

Daily Traffic

Date	Pageviews	Unique Visitors
Mon, Apr 7	63	23
Tue, Apr 8	186	57
Wed, Apr 9	131	40

Sat, Apr 26	27	16
Sun, Apr 27	157	61
Mon, Apr 28	92	35
Tue, Apr 29	58	21

Date	Pageviews	Unique Visitors
Wed, Apr 30	47	15
Total	1,509	591

- **Two clear peaks:** Apr 8 (186 pv, launch) and Apr 27 (157 pv, ~3 weeks later). The Apr 27 spike is the most interesting event of the month — happened on a Sunday and pulled 61 unique visitors. Worth identifying the source (a share, post, or newsletter mention).
- **Apr 28 follow-through:** 92 pv the day after the spike suggests traction, not just a one-off.
- **Mid-week strength persists.** Tue–Wed remain the strongest weekdays across the month. Sat–Sun are reliably the weakest.
- **Final week (Apr 27–30) averaged 88 pv/day**, more than double the prior week. April is ending on an upswing.

Top Pages

Page	Pageviews	% of Total	Visitors	Bounce Rate
/ (Homepage)	590	39%	445	77%
/science	192	13%	119	53%
/diagnostics	191	13%	142	70%
/practitioners	154	10%	111	71%
/interventions	148	10%	104	67%
/about	139	9%	102	71%
/waitlist	60	4%	55	88%
/terms	9	<1%	7	56%
/privacy	8	<1%	8	100%
/s/ INUSpheresis_Booklet_... pdf	7	<1%	6	83%
/privacypolicy	3	<1%	2	33%
/blog (and /blog/copper-toxicity-symptoms)	4	<1%	4	100%

Page	Pageviews	% of Total	Visitors	Bounce Rate
/login	2	<1%	2	100%
/contact	1	<1%	1	100%

Key observations

- **/science is the clear winner among content pages.** 53% bounce is by far the lowest on the site — visitors who reach the science page stay and explore. This is the single best engagement signal in the report and strong evidence that scientific credibility is what differentiates Proxima for this audience.
- **/diagnostics, /practitioners, /about, and /interventions cluster in the 67–71% bounce range.** That's a healthy band but flagged as a group to test — shaving 10 points off these pages would meaningfully improve depth.
- **/waitlist 88% bounce is expected.** Visitors hit it, sign up (or don't), and leave. Conversion-focused page.
- **The Inusphere booklet PDF was downloaded 7 times** — low volume but high intent. Consider tracking PDF downloads as a conversion event.
- **Blog traffic is essentially zero (4 pv).** The new copper-toxicity post hasn't started indexing yet. Watch this in May.

Traffic Sources

Referrer	Pageviews	% of Total
Direct / No referrer	1,323	88%
google.com	111	7%
linkedin.com	11	1%
l.instagram.com	9	1%
longjourney.vc	8	1%
t.co (Twitter/X)	7	<1%
mail.google.com	7	<1%
statics.teams.cdn.office.net	4	<1%

Referrer	Pageviews	% of Total
m.facebook.com	4	<1%
bing.com	4	<1%
search.yahoo.com	3	<1%
jotform.com	3	<1%
vercel.com	3	<1%
Other (DuckDuckGo, Brave, Lenny's, ChatGPT, etc.)	12	<1%

Key observations

- **Direct share is still the dominant channel (88%).** Proxima is being passed person-to-person via DMs, text, and email — channels that lose referrer data. This is consistent with a high-trust, founder-driven launch.
- **Google = 111 pv (7%).** Organic search has crossed the threshold from rounding error to a real channel. Worth pulling Google Search Console next month to see which queries are converting.
- **LinkedIn (11), longjourney.vc (8), Instagram (9)** — three meaningful share clusters. The LinkedIn presence and the VC firm link are both worth investigating; longjourney.vc is a healthtech-adjacent fund.
- **Microsoft Teams referral (4 pv)** — somebody shared the link in a corporate Teams chat. First sign of B2B / practitioner-channel sharing.
- **Gmail referral (7 pv)** — email sharing now traceable.
- **ChatGPT referral (1 pv)** — LLM-driven discovery is real but tiny.
- **vercel.com (3 pv)** is internal/preview traffic; can be ignored.

Geographic Breakdown

Country	Pageviews	% of Total
United States	942	62%
Switzerland	131	9%
Canada	81	5%

Country	Pageviews	% of Total
Germany	61	4%
India	58	4%
Brazil	46	3%
United Kingdom	41	3%
Thailand	40	3%
Argentina	19	1%
Portugal	13	1%
Italy	10	1%
Mexico	7	<1%
Taiwan, Netherlands, Australia	18	1%
Other (24 countries)	42	3%

Key observations

- **US is the durable core (62%).** Once the launch-week share noise washes out, two-thirds of traffic is North American. Aligns with go-to-market.
- **Switzerland (9%) is the second-largest country** — but this is concentrated in the Apr 7–10 launch window, when a specific Swiss share drove ~86 pageviews. It hasn't repeated since. **Not a real cohort.**
- **Canada (5%)** is the genuine #2 market once the Swiss share is normalized. Aligns with practitioner-network expansion plans.
- **32 countries represented overall.** Breadth is wide — the message resonates internationally — but real depth is concentrated in US + Canada.
- **Thailand (40 pv)** is also a launch-week artifact (one big share); not a sustained source.

Device & Technology

Device Type

Type	Pageviews	% of Total
Desktop	1,016	67%

Type	Pageviews	% of Total
Mobile	493	33%

Browser

Browser	Pageviews	% of Total
Chrome (Desktop)	750	50%
Mobile Safari	203	13%
Chrome Mobile iOS	164	11%
Safari (Desktop)	108	7%
Microsoft Edge	76	5%
Opera	63	4%
Chrome Mobile (Android)	54	4%
Firefox (Desktop + Mobile)	25	2%
Brave	17	1%
Twitter In-App Browser	15	1%
Google Search App	15	1%
Instagram In-App Browser	14	1%
Facebook In-App / Samsung	4	<1%

Operating System

OS	Pageviews	% of Total
macOS	575	38%
iOS	428	28%
Windows	378	25%
Android	65	4%
Linux	51	3%
Chrome OS	12	1%

Key observations

- **Desktop majority (67%).** This is a research-and-evaluation product, not a casual mobile-scroll site. Visitors are sitting down to read.
- **Apple ecosystem dominates: macOS + iOS = 66%.** The audience skews toward higher-income, design-conscious consumers — exactly the cohort Proxima targets.
- **Windows is a meaningful 25%** and growing (it was 22% in weeks 2–3). Practitioner traffic likely skews Windows.
- **In-app browsers represent 44 pv (3%)** across Twitter, Instagram, Google Search, and Facebook. Worth a one-time QA pass to confirm the quiz and signup forms work in those embedded browsers (cookie/JS environments are restrictive).
- **Opera 4%** is almost entirely the Swiss launch-week traffic — correlate Opera + Switzerland and you essentially have one share.

Custom Event Tracking

Event	Count	Unique Visitors
scroll_depth	601	110
nav_clicked	514	176

quiz_question_back	5	4
quiz_why_we_ask_opened	3	3

Event	Count	Unique Visitors
stat_source_clicked	3	2

Funnel Analysis: Diagnostic Quiz (full month)

Stage	Count	Rate
Quiz started	33	—
Quiz completed	20	61% complete
Email submitted	10	50% of completers
Email skipped	8	40% of completers
Diagnostic signup	6	18% of starters

- **33 quiz starts and 20 completions for the month.** Completion rate (61%) matches what we saw in Weeks 2–3 — the post-launch drop from 87% has stabilized at the 60% mark.
Recommended action: pull the per-question drop-off data (instrumented Apr 14) and identify the abandonment question.
- **6 diagnostic signups + 12 practitioner inquiries = 18 high-intent leads in April.** Practitioner inquiries are now outpacing consumer signups 2:1, which is a meaningful signal about who the highest-intent traffic actually is.
- **research_link_clicked 23x** — visitors are clicking through to source studies. Combined with /science's low bounce rate, this is the strongest evidence-engagement story of the month.
- **footer_link_clicked 137 events** across 73 visitors — people are reaching the bottom of the page and clicking. Page-depth is healthy.

Engagement Signals

- **scroll_depth fired 601 times across 110 unique visitors.** Average ~5.5 scroll milestones per engaged visitor — visitors who don't bounce go deep.
- **CTA click rate: 35 / 1,509 pageviews = 2.3%.** Flat to slightly down from Week 1 (2.3%) and Weeks 2–3 (2.6%). CTA performance remains the most stubborn metric — design/copy A/B test recommended.
- **quiz_started/cta_clicked = 94%** suggests CTAs are mostly converting to quiz starts (the primary intended action). Good alignment.

Recommendations for May

1. **Identify the Apr 27 spike source.** 157 pv on a Sunday is exceptional. Check email blasts, newsletter mentions, and social shares around Apr 26–27. If repeatable, this is a playbook.
2. **Run the per-question quiz drop-off analysis.** 39% of starters abandon mid-quiz. The instrumentation exists; pull the data and find the question that loses people.
3. **Pull Google Search Console.** 111 organic pageviews is now enough volume to learn which queries are working. Plan blog content against the winning queries.
4. **Reach out re: longjourney.vc and the LinkedIn cluster.** A VC firm is linking to Proxima, and 11 LinkedIn-referred pageviews suggest a professional/practitioner audience starting to circulate the link. Both worth direct follow-up.
5. **QA in-app browsers (Instagram, Twitter, Google Search App).** 44 pageviews in restrictive embedded browsers. Validate the quiz and waitlist forms function correctly.
6. **Track PDF downloads as conversions.** 7 Inusphere booklet downloads in April — this is high-intent behavior currently invisible in the funnel.
7. **Prioritize practitioner channel.** Practitioner inquiries (12) outpaced diagnostic signups (6) 2:1. Lead with practitioner messaging in May campaigns and consider a dedicated practitioner landing page if /practitioners traffic continues at this rate.
