

Proxima Health — May Monthly Analytics Report

proxima.health | May 1–31, 2026

Site: proxima.health | **Period:** May 1–31, 2026 (full month) | **Source:** Vercel Web Analytics

First full calendar month of steady-state operation. April included the April 7 launch surge; May is the cleaner baseline — what traffic looks like once the launch-week sharing washes out.

Summary

Total Pageviews	Unique Visitors	Pages / Visitor	Bounce Rate
1,047	475	2.2	63%

Month-over-month

Month	Days	Pageviews	Visitors	PV / day	Bounce
April (active days)	24	1,509	591	63	71%
May	31	1,047	475	34	63%

The honest read: **traffic stepped down from April**. Pageviews fell 31% and visitors 20%. But April’s average was carried by the launch spike (186 pv on Apr 8, 157 on Apr 27); the *late-April* steady-state was already running ~60 pv/day. May settled near **34 pv/day** — a genuine post-launch normalization, not a collapse.

The bright spot: **bounce rate improved 8 points (71% → 63%)**. Fewer drive-by launch-share visitors, more deliberate ones. The traffic is smaller but slightly higher quality.

Daily Traffic

Date	Pageviews	Unique Visitors
Fri, May 1	96	31
Sat, May 2	49	24
Sun, May 3	18	14
Mon, May 4	28	23

Fri, May 30	2	2
Sat, May 31	10	6
Total	1,057	—

Daily buckets sum to 1,057; the period-level dashboard figure is 1,047. The ~10-pageview difference is normal day-boundary/timezone rounding. Summary uses the dashboard figure.

- **Biggest day: May 1 (96 pv)** — carryover from the late-April upswing and likely the April report send. **May 27 (73 pv, 37 visitors)** was the strongest mid-month day.
- **The pattern from April holds:** Tue–Fri are the strongest days, Sat–Sun the weakest. May 17 (5 pv) and May 30 (2 pv) were near-dead weekend days.
- **No repeat of the April 27 spike.** That 157-pv Sunday event did not recur — it was a one-off share, not a repeatable channel. May had no comparable single-day surge.
- **Late-month softness.** The final stretch (May 24–31) averaged just 25 pv/day. End-of-month traffic is the weakest window and a candidate for a scheduled content or email push.

Top Pages

Page	Pageviews	% of Total	Visitors	Bounce Rate
/ (Homepage)	442	42%	362	83%
/about	128	12%	95	68%
/interventions	112	11%	82	72%
/diagnostics	107	10%	82	77%
/practitioners	97	9%	70	68%
/science	91	9%	69	77%

Page	Pageviews	% of Total	Visitors	Bounce Rate
/waitlist	49	5%	44	89%
/terms	10	1%	10	100%
/privacy	5	<1%	5	100%
/contact	3	<1%	3	100%
/blog (+ apheresis post)	3	<1%	2	50%
/products, /shop, /team	6	<1%	6	100%

Key observations

- **/about jumped to the #2 content page (128 pv, 68% bounce).** New this month — visitors are investigating who is behind Proxima. The 68% bounce (tied for best on the site with /practitioners) says the about page is doing its job: people who land there stick around.
- **Homepage bounce rose to 83% (was 77%).** With launch-share traffic gone, a larger share of homepage visitors arrive, glance, and leave. This is the page to focus conversion work on — it is 42% of all traffic and the weakest-converting top page.
- **/science lost its standout engagement.** In April it had the lowest bounce on the site (53%); in May it climbed to 77% and slipped from #2 to #6 by traffic. This is the most important *negative* change in the report. Worth checking whether April's recent imagery/content edits to surrounding pages changed how visitors reach /science, and whether the page still earns the depth it did at launch.
- **/practitioners and /about are the engagement leaders (both 68%).** The practitioner story continues to resonate — consistent with the lead data below.
- **Blog is still effectively zero (3 pv).** The toxin-symptom posts added through April/May have not begun driving organic traffic yet. Indexing for new content typically lags 4–8 weeks; June is the month to watch for the first blog-driven sessions.

Traffic Sources

Referrer	Pageviews	% of Total
Direct / No referrer	886	85%
google.com	112	11%
longjourney.vc	13	1%
linkedin.com	8	1%
l.instagram.com	7	1%
bing.com	6	<1%
duckduckgo.com	6	<1%
docreview.pitchbooklabs.com	3	<1%
mail.google.com	2	<1%
t.co (Twitter/X)	3	<1%
m.facebook.com	2	<1%
Other (Gemini, Yandex, Thingtesting, Teams, etc.)	~9	<1%

Key observations

- **Direct remains dominant (85%).** Proxima is still spread person-to-person via DM, text, and email. Steady from April (88%) — this is the founder-driven, high-trust distribution pattern, and it has not changed.
- **Google held at 112 pv (11%, up from 7% share).** Organic search is now consistently the #2 channel two months running.
Caveat: Google traffic bounces at 86% — searchers are arriving on a query, not finding the exact answer, and leaving. This is the single clearest argument for the blog/SEO content plan: capture the query, then keep the visitor.
- **longjourney.vc is back (13 pv).** The healthtech-adjacent VC firm linked to Proxima again this month. Two consecutive months of referral traffic from the same fund is worth a direct follow-up.
- **LLM discovery is now multi-engine.** Referrals appeared from Gemini and (via in-app) ChatGPT-style sources alongside the

usual search engines. Tiny volume, but the trend line is up — worth ensuring the site is answerable by AI assistants.

- **docreview.pitchbooklabs.com (3 pv)** is a doc/pitch-review tool referral — likely the link circulating inside an investor or partner review workflow.

Geographic Breakdown

Country	Pageviews	% of Total
United States	761	73%
United Kingdom	40	4%
Germany	35	3%
Argentina	31	3%
Switzerland	30	3%
Canada	23	2%
Thailand	20	2%
Sweden	17	2%
India	17	2%
Italy	9	1%
Netherlands, Singapore, Poland	21	2%
Other (~25 countries)	~43	4%

Key observations

- **US share climbed to 73% (from 62%).** Exactly as predicted last month: once launch-week international shares wash out, the durable core is firmly North American. This is the go-to-market market, and the data confirms it.
- **The April call on Switzerland was correct.** Switzerland dropped from 9% to 3% — April's Swiss numbers were a single launch-week share, not a real cohort. It has now normalized.
- **Canada (2%) softened.** The genuine #2 market from April is quieter this month. Worth watching against the practitioner-network expansion plan — if Canada is a target, it needs active seeding, not organic drift.
- **Long tail stays wide (~35 countries).** The message travels internationally, but real depth is US-concentrated. UK,

Germany, and Argentina each contributed a small, low-bounce cluster worth nothing more than a note for now.

Device & Technology

Device Type

Type	Pageviews	% of Total
Desktop	797	77%
Mobile	237	23%
Tablet	3	<1%

Browser

Browser	Pageviews	% of Total
Chrome (Desktop)	658	63%
Mobile Safari	161	15%
Microsoft Edge	65	6%
Safari (Desktop)	40	4%
Chrome Mobile iOS	38	4%
Firefox	25	2%
Chrome Mobile (Android)	16	2%
Instagram In-App Browser	12	1%
Opera	10	1%
Firefox Mobile iOS	9	1%
Twitter / Samsung / WeChat	4	<1%

Operating System

OS	Pageviews	% of Total
macOS	515	49%
Windows	236	23%
iOS	221	21%

OS	Pageviews	% of Total
Linux	46	4%
Android	19	2%
Chrome OS	1	<1%

Key observations

- **Desktop strengthened to 77% (from 67%).** Even more of a sit-down, research-and-evaluate audience than April. Mobile is a minority use case here — prioritize desktop layout and reading experience.
- **Apple ecosystem still leads: macOS + iOS = 70%.** Consistent with the higher-income, design-conscious target cohort.
- **Windows steady at 23%.** Likely the practitioner/clinical segment — correlates with the strong practitioner-inquiry lead volume.
- **In-app browsers down to ~16 pv (Instagram, Twitter, WeChat).** Lower than April. Still worth confirming the quiz and waitlist forms work inside Instagram's embedded browser, since that is the largest in-app source.

Funnel Analysis: Diagnostic Quiz (full month)

Stage	Count	Rate
Quiz started	16	—
Quiz completed	13	81% complete
Email submitted	6	46% of completers
Email skipped	6	46% of completers
Diagnostic signup	2	13% of starters

- **Quiz completion jumped to 81% (from 61% in April).** Of the people who start, far more finish — the strongest funnel signal in the report. The quiz experience itself is working well; the problem is upstream (only 16 starts).
- **Quiz starts fell to 16 (from 33).** This tracks the overall traffic decline, but the start rate is the metric to grow. With 1,047 pageviews, 16 starts is a ~1.5% start rate — the top of the funnel is the constraint, not the quiz.
- **Practitioner inquiries (12) again crush diagnostic signups (2) — a 6:1 ratio,** up from 2:1 in April. This is now an unmistakable, two-month trend: **the highest-intent traffic Proxima attracts is practitioners, not consumers.** The product story and lead capture should lead with the practitioner channel.
- **14 high-intent leads total** (12 practitioner + 2 diagnostic), down from 18 in April but consistent given lower traffic.
- **research_link_clicked held at 23.** Visitors still click through to source studies — the evidence-engagement behavior survived even as /science's bounce rose. The appetite for proof is real.

Engagement Signals

- **scroll_depth: 357 fires across 75 visitors** (~4.8 milestones each). Engaged visitors still go deep, even though fewer of them arrive.

- **CTA click rate: 15 / 1,047 = 1.4%**, down from April's 2.3%.
This is the metric to fix. Lower traffic plus a softer homepage bounce (83%) means the CTA is being seen less and clicked less — a homepage CTA design/copy test is the highest-leverage experiment for June.
- **nav_clicked 393 across 136 visitors** — navigation is healthy; people explore the site once engaged.

Recommendations for June

1. **Fix the top of the funnel, not the quiz.** Quiz completion is excellent (81%); the constraint is the ~1.5% start rate. Make the quiz entry point more prominent on the homepage and run a CTA copy/design test — CTA click rate fell to 1.4% and is the single highest-leverage lever.
2. **Investigate /science's bounce regression (53% → 77%).** It was the best-engaging page at launch and is now average. Check whether April's imagery/layout edits changed how visitors reach it, and restore whatever made it sticky.
3. **Capitalize on Google's 86% bounce with content.** Organic search is the #2 channel but visitors arrive and leave. Pull Google Search Console, identify the winning queries, and point the (already-written) toxin-symptom blog posts at them. This is the clearest path to growing the top of the funnel.
4. **Lead with the practitioner channel.** Two months of 2:1 then 6:1 practitioner-to-consumer lead ratios is a strategy signal, not noise. Consider a dedicated practitioner landing page and practitioner-first messaging in June outreach.
5. **Follow up on longjourney.vc.** Two consecutive months of referral traffic from the same VC fund. Worth a direct conversation.
6. **Schedule an end-of-month push.** The final week of May averaged 25 pv/day — the weakest window. A timed email or content drop around the 24th–28th could smooth the trough.
7. **Watch for first blog-driven traffic.** Posts added in April/May should begin indexing in June. If organic blog sessions appear, double down on the content plan; if not by July, reassess SEO approach.
