

‘THE PLASTIC DETOX’ SEM PROPOSAL

THE OPPORTUNITY

Netflix's *The Plastic Detox* premiered March 16, 2026. It follows six couples with unexplained infertility through a 90-day experiment to eliminate plastic exposure, guided by reproductive epidemiologist Dr. Shanna Swan. Media coverage is already appearing across health, parenting, and lifestyle outlets.

The documentary is targeting precisely the health-anxious, fertility-conscious, toxin-aware consumer Proxima is built for. When cultural moments like this break in a niche, Google search volume on related terms spikes dramatically — and the brands that move fast own the category association.

The window is roughly 4–6 weeks. Search volume for "microplastics," "plastic detox," "BPA fertility," and adjacent terms will peak in the next 2–3 weeks and return toward baseline by late April. This proposal outlines how Proxima can capture that demand and route it to the site.

KEYWORD STRATEGY

We recommend three tiers of keywords, each reflecting a different stage of consumer awareness and proximity to conversion.

Tier 1 — Direct Documentary Intent

These terms will spike this week and sustain for 3–4 weeks. Audiences are in discovery mode — they just watched and are looking for immediate action.

- "plastic detox" — High intent, action-oriented. Est. 40K–80K searches/mo during spike. Rec. bid: \$2.50–4.00
- "the plastic detox netflix" — High intent, branded. Est. 15K–30K. Rec. bid: \$1.50–2.50
- "how to reduce microplastics exposure" — High intent, product-adjacent. Est. 20K–40K. Rec. bid: \$3.00–5.00

- "BPA free health products" — High intent, commercial. Est. 8K–15K. Rec. bid: \$3.50–5.50
- "microplastics health effects" — Medium intent, educational. Est. 25K–50K. Rec. bid: \$2.00–3.50

Tier 2 — Fertility & Hormonal Health

Core Proxima territory. These terms have sustained volume and will receive a meaningful temporary boost from the documentary's fertility narrative. This is where Proxima's differentiation is strongest.

- "endocrine disruptors fertility" — High intent, problem-aware. Est. 12K–25K. Rec. bid: \$4.00–6.00
- "phthalates health risks" — Medium intent, research. Est. 8K–15K. Rec. bid: \$2.50–4.00
- "toxin free fertility support" — High intent, solution-seeking. Est. 5K–12K. Rec. bid: \$5.00–7.00
- "hormone health clean products" — High intent, commercial. Est. 6K–14K. Rec. bid: \$4.50–6.50
- "unexplained infertility causes" — High intent, research + action. Est. 4K–9K. Rec. bid: \$5.50–8.0

Tier 3 — Broad Awareness / Retargeting Seed

Lower cost, higher volume. Use for brand impressions and to build the retargeting audience pool. Lower direct conversion rate but useful for fueling the broader funnel.

- "microplastics in food" — Discovery stage. Est. 60K–120K. Rec. bid: \$1.00–2.00
- "BPA dangers" — Discovery stage. Est. 30K–60K. Rec. bid: \$1.00–2.00
- "clean living health" — Medium intent, brand-adjacent. Est. 20K–45K. Rec. bid: \$2.00–3.50
- "toxin free lifestyle" — Medium intent, lifestyle. Est. 15K–30K. Rec. bid: \$2.00–3.00

CREATIVE

The copy strategy is straightforward: validate what the documentary surfaced, position Proxima as the hopeful resolution, and give viewers one clear next step. The documentary did the fear and now Proxima provides the answer.

Claims compliance note: All ad copy must clear Mike/Legal review before going live. Frame Proxima as "supporting hormone health" and "reducing plastic exposure", not treating or reversing infertility. No causal claims.

Sample ad — Tier 1 (Documentary audience):

Headline: Saw The Plastic Detox? Here's What to Do Next

Body: The science is clear: reducing plastic exposure supports hormone and fertility health. Proxima...

Sample ad — Tier 2 (Fertility / hormone audience):

Headline: Toxin-Free Fertility Support — Built With Practitioners

Body: Microplastics. Endocrine disruptors. Environmental toxins. If you're trying to conceive or support your hormonal health, Proxima...

BUDGET RECOMMENDATION

We recommend a 6-week campaign, front-loaded in weeks 1–3 while search volume is at peak, tapering in weeks 4–6 as the documentary fades from the cultural foreground.

- Tier 1 — Documentary keywords (weeks 1–4): \$4,000–6,000
- Tier 2 — Fertility & hormonal health (weeks 1–6): \$5,000–7,000
- Tier 3 — Broad awareness / retargeting seed (weeks 1–6): \$2,000–3,000
- Campaign setup & management (vendor, 6 weeks): \$1,500–2,500

- Total: \$12,500–18,500

LAUNCH PLAN & DEADLINE

Target launch: week of March 23. This is aggressive, and it needs to be.

Hard deadline: Campaigns must be live by March 28.** After that date, the documentary conversation will begin to fade from active social media and search behavior will start normalizing. Launching in April captures meaningfully reduced volume. Launching in May is largely a missed opportunity.

This week (March 17–21):

- Proxima website finalized and live by end of week
- SEM vendor identified, briefed, and contracted
- Ad copy drafted and submitted for Mike/Legal review
- Keyword list and bid strategy finalized with vendor

Launch week (March 23–28):

- Mike review complete, copy approved
- Google Ads account configured, campaigns built
- All three keyword tiers live by March 25
- 48-hour performance check — optimize bids on underperformers

Weeks 4–6:

- Shift budget toward Tier 2 as documentary terms cool
- Launch retargeting campaigns to non-converting visitors
- Compile performance report: leads, CPC, conversion rate
- Decision point: continue Tier 2 as ongoing evergreen campaign

DECISIONS NEEDED

1. Budget approval.
 - Approve the investment range (\$12,500–18,500).
 - If Proxima wants to start lean, a \$7,500 pilot focused on Tier 1 and Tier 2 only is viable — evaluate at day 7 and scale if the data supports it.
2. Vendor selection.
 - Prism will identify and brief an SEM vendor this week for rapid onboarding. Prioritize vendors who can move to campaign build within 48 hours of contract.
 - Prism manages creative direction and copy; vendor manages campaign execution and optimization.
3. Landing page (phase two).
 - The website launch this week is the foundation. As a follow-on, we'd recommend a lightweight dedicated page tied to the documentary narrative (ie "what to do after watching The Plastic Detox") to maximize conversion from Tier 1 traffic.
 - Prism can brief that page for development immediately after the main site goes live.
