Proxima Health — October Monthly Analytics Report

proxima.health | October 1–31, 2026

Site: proxima.health | **Period:** October 1–31, 2026 (full month) | **Source:** Vercel Web Analytics

> **October was the first month since July with no social spike, and the underlying traffic edged up.** The site recorded **1,164 pageviews from 528 visitors, 38 per day**, against September's 33 per day once its Facebook weekend is removed. That is a 15% gain in the baseline and back in line with July. The audience got more serious: **pages per visitor rose to 2.2, the highest since the bot-era numbers washed out**, desktop returned to 72% of pageviews, and **/diagnostics had its best organic month on record (262 pageviews, 182 visitors)**, overtaking every other content page. **Google recovered slightly (110 → 120)**. Practitioner inquiries held at **10**. The weak spot is conversion: quiz starts fell to 9, and diagnostics signups came from only 6 people despite the jump in /diagnostics traffic.

Summary

Total Pageviews	Unique Visitors	Pages / Visitor	Bounce Rate
1,164	528	2.2	62%

Month-over-month

Month	Days	Pageviews	Visitors	PV / day	Bounce
June	30	1,121	420	37	54%
July	31	1,224	590	39	60%
August	31	5,720	2,794	185	58%
August, clean window (Aug 8–31)	*24*	*1,494*	*738*	*62*	*60%*
September	30	1,227	605	41	62%
September excl. Facebook spike	*27*	*880*	—	*33*	*63%*
October	31	**1,164**	**528**	**38**	**62%**

October needs no clean-window adjustment, which makes it the most comparable month since July. Against September's baseline (33/day) it is **up 15%**; against July (39/day) it is level. Fewer visitors (528 vs. 605) read more pages each (2.2 vs. 2.0): without a social share bringing in one-page browsers, the people who came were there to read.

Total	**1,164**	—

- **The month had a clear weekday rhythm.** Weekdays averaged about 45 pageviews and weekends about 20. That is the pattern of a professional audience browsing during work hours, and it matches the return to desktop.

- **October 13 (91 pageviews, 29 visitors) was a reading day, not a traffic spike.** No referrer sent more than 8 visits. Instead, a few visitors read deeply: /diagnostics drew 29 pageviews and /science 12. Long Journey visited three times that day.
- **October 27–29 was the strongest stretch of the month (182 pageviews).** It was spread across Google (22 referrals), a small Facebook thread (12), and Gmail (3, someone emailing the link). October 29 also included a group of six visitors from Argentina (see Geography) and the month's first BoxGroup visit.

Top Pages

Page	Pageviews	% of Total	Visitors	Bounce Rate* (Oct)	Bounce Rate* (Sep)
/ (Homepage)	368	32%	311	56%	58%
/diagnostics	262	23%	182	36%	28%
/interventions	123	11%	93	25%	18%
/about	116	10%	95	23%	20%
/practitioners	107	9%	81	15%	16%

/quiz	59	5%	47	6%	18%
/privacy	22	2%	22	—	—
/terms	19	2%	19	—	—
Other (/careers, /contact, /tests, booklet PDF)	4	<1%	4	—	—

**Per-page bounce on the v2 methodology, comparable to all reports since June.*

Key observations

- **/diagnostics nearly doubled (136 → 262 pageviews, 116 → 182 visitors) and took 23% of all traffic**, the largest share any inner page has had. It is also the top Google landing page after the homepage (21 Google arrivals, up from 13). Without any change to the page, people are increasingly arriving at Proxima to learn about testing.
- **But /diagnostics bounce rose to 36%** (28% in September), and signups from it fell (see Events). More people are landing directly on /diagnostics, often from search, and more of them leave without going further. The page is now the second front door, and it has no quiz link.
- **The homepage fell to 32% of pageviews** (46% in September), mostly because no social share drove one-page homepage visits. Homepage bounce improved slightly to 56%.
- **/quiz bounce dropped to 6%.** Almost everyone who reaches the quiz page starts interacting with it. The problem is getting people there, not keeping them.
- **The blog recorded zero pageviews.** Still unlisted, by design. Seven posts shipped in October (vinyl chloride, barium, selenium, antimony, cobalt, thallium, 1-bromopropane), bringing the unlisted library to roughly 77 posts.
- **Guessed URLs:** /careers, /contact, /tests (one each). /contact has now been tried three months running.

Traffic Sources

Referrer	Pageviews	% of Total
Direct / No referrer	923	79%
google.com	120	10%
Facebook (m.facebook.com, facebook.com)	43	4%
longjourney.vc	19	2%
l.instagram.com	10	1%
linkedin.com	9	1%
t.co (X / Twitter)	8	1%
Microsoft Teams	6	<1%

Referrer	Pageviews	% of Total
bing.com	6	<1%
boxgroup.com	5	<1%
mail.google.com (Gmail)	3	<1%
search.brave.com	3	<1%
Salesforce instances (Rho, other)	2	<1%
Other (DuckDuckGo, Yahoo, JotForm, misc.)	7	1%

Key observations

- **Google recovered 9%: 120 pageviews from 109 visitors, at a 40% bounce** (110 / 103 / 46% in September). This is still well below August (214) and below July (167). The decline in September was not a one-month blip, but it has stopped getting worse. Search Console is still the open question.
- **Google sent visitors to /diagnostics (21) and /about (13)**, both up from September. Search is finding the diagnostics content.
- **BoxGroup is new.** boxgroup.com, an early-stage venture fund, sent 5 visitors on 4 separate days (Oct 16, 29, 30, 31). Multiple visits across days usually means a firm doing diligence, not a one-off click.
- **Long Journey: 19 visitors across 13 separate days**, its highest day-count yet. It has visited every month since April.
- **More signs of the site being passed around inside organizations:** 6 visits from links opened in Microsoft Teams (2 in September), 3 from Gmail, and 2 from Salesforce instances, one belonging to Rho (a fintech business-banking company). This continues the fintech pattern from July and August (Stripe, Ramp).
- **Facebook dropped to 43 pageviews from 19 visitors**, mostly small threads on October 21 and 29–31 with a few people reading many pages each. Instagram (10) and LinkedIn (9) were both up slightly from September.

Geographic Breakdown

Country	Pageviews	Visitors	% of PV
United States	826	372	71%
Argentina	72	25	6%
Germany	48	14	4%
United Kingdom	37	13	3%
India	33	15	3%
Canada	23	15	2%
Pakistan	17	3	1%
Australia	12	4	1%
Mexico	11	2	1%
Switzerland	10	8	1%
Other (24 countries)	75	~57	6%

Key observations

- **US share held at 71% of pageviews and 70% of visitors**, in line with the last three months.
- **Argentina appeared as the #2 country: 72 pageviews from 25 visitors, 30 of them on /diagnostics.** The traffic came in small clusters (Oct 7, 12, 22, 28–29), mostly on Macs, with October 29 bringing six visitors at once. This does not look like a crawler (it reads deeply, on real devices, and moves between pages). It looks like a small group, perhaps a clinic, lab or agency, evaluating Proxima's diagnostics offering. Worth asking whether anyone at Proxima has an Argentine contact.
- **Germany returned to 48 pageviews from 14 visitors**, a human ratio across Mac, iOS and Windows. Not the June crawler signature.
- **China (9 visitors, one page each)** is the usual indexing crawler. Discount it.
- **34 countries recorded a visit**, down from 42 in September.

Device & Technology

Device Type

Type	Pageviews	%
Desktop	836	72%
Mobile	326	28%

Browser

Browser	Pageviews	%
Chrome (Desktop)	677	58%
Mobile Safari	200	17%
Microsoft Edge	74	6%
Safari (Desktop)	49	4%
Chrome Mobile (Android)	46	4%
Chrome Mobile iOS	39	3%
Firefox (all platforms)	33	3%
Instagram in-app	22	2%
Other (Samsung, X, Google app, Opera, Facebook)	24	2%

Operating System

OS	Pageviews	%
Windows	424	36%
macOS	377	32%
iOS	273	23%
Android	53	5%
GNU/Linux	36	3%

- **Desktop is back to 72%**, close to July's 75%. Confirmed: the August and September mobile surges were social traffic. The site's steady-state audience is desktop, and the steady-state

audience is the one that reads /diagnostics and submits practitioner inquiries.

- **Windows is the #1 operating system for the first time (36%)**, ahead of macOS. Windows plus Edge (6%) is the typical profile of clinical and corporate machines, consistent with a practitioner and professional audience.
- **GNU/Linux at 36 pageviews from 33 visitors** is the residual crawler bucket. Nothing to act on.

Custom Event Tracking

Event	Count	Unique Visitors
scroll_depth	371	75
nav_clicked	338	132
footer_link_clicked	93	44
quiz_question_answered	71	7
cta_clicked	12	11
practitioner_inquiry_submitted	10	10
quiz_started	10	9
diagnostics_signup_submitted	10	6
quiz_completed	7	7
research_link_clicked	6	5
quiz_email_skipped	4	4
quiz_email_submitted	3	3
stat_source_clicked	1	1

Practitioner inquiries: steady

Month	Submissions	Days with a submission	Per 100 visitors
July	9	~9	1.5
August	28	16	1.0
September	11	8	1.8

Month	Submissions	Days with a submission	Per 100 visitors
October	**10**	**5**	**1.9**

Ten inquiries on five days (Oct 3, 9, 25, 28, 29). The busiest was October 9 with three, two in the same hour and one four hours later, which fits a practice where two people submit together. No bot signature. Inquiries per visitor are at their highest rate yet: the October audience is smaller but more qualified.

Diagnostic Quiz funnel

Stage	Unique Visitors	Rate
Quiz started	9	—
Quiz completed	7	78% complete
Email submitted	3	43% of completers
Email skipped	4	57% of completers

Diagnostics signup

Month	/diagnostics visitors	Signups (unique)	Signup rate
August	409	52	13%
September	116	9	8%
October	**182**	**6**	**3%**

The form recorded 10 submissions, but 5 came from a single US desktop visitor within two hours on October 20. That is most likely a repeat submission or an internal test. Only unique visitors are counted above. Worth checking whether those five arrived in HubSpot as duplicates.

- **/diagnostics traffic rose 57% while signups fell by a third.** The signup rate dropped from 8% to 3%. The new /diagnostics visitors are arriving from search and from abroad (Argentina), reading, and leaving. They may not be ready to sign up for testing on the first visit, and the page offers them nothing smaller to do, such as taking the quiz.
- **Quiz starts fell to 9**, the lowest since July. With no social share sending people to the homepage, the quiz is only reached through the homepage, /science and the footer. 182 people

visited /diagnostics and none of them could click through to the quiz from there.
- **Completion is unchanged at 78%, email capture unchanged at 43%.** The quiz itself is stable. It needs more people sent to it and a better email screen.

Follow-up on September's recommendations

1. **Pull Google Search Console.** Not visible from the analytics side. Google recovered slightly but remains well below August and July.
2. **Decide on the blog.** Still unlisted. Seven more posts shipped in October.
3. **Ship the quiz routing experiment.** Not shipped. October makes the strongest case yet: /diagnostics had its best month and the quiz had its worst.
4. **Fix the quiz email screen.** Not shipped.
5. **Plan the next share.** No planned social activity visible. Facebook, Instagram and LinkedIn together sent 62 pageviews.
6. **Keep calling on the investor signals.** BoxGroup joined Long Journey this month.

No site changes other than blog posts shipped in October.

Recommendations for November

1. **Add a quiz link to /diagnostics.** This is now the single highest-leverage change on the site. /diagnostics is the second front door (23% of traffic, top Google landing page after the homepage), its signup rate fell to 3%, and the quiz is the natural next step for a visitor not yet ready to book testing. Sixth month recommended.
2. **Give /diagnostics a second, smaller call to action.** Alongside "sign up", offer "take the 3-minute assessment" or "get the booklet by email". The booklet PDF already has an audience of deep readers.
3. **Pull Google Search Console.** Two months after the drop, this is still the open question. It also shows which queries bring people to /diagnostics, which tells you what those visitors are looking for.
4. **List the blog.** About 77 posts are ready. Google traffic is soft, and listing the blog is the biggest search lever available.

5. **Follow up on BoxGroup and Long Journey.** Two funds with repeat, multi-day visits in the same month.
6. **Check the October 20 diagnostics submissions in HubSpot** for duplicates, and ask whether anyone knows the Argentine group reading /diagnostics.
7. **Add a /contact page.** It has been tried three months in a row. A simple page that routes patients and practitioners to the right form costs little and catches visitors who are looking for a person.
