Proxima Health — September Monthly Analytics Report

proxima.health | September 1–30, 2026

Site: proxima.health | **Period:** September 1–30, 2026 (full month) | **Source:** Vercel Web Analytics

> **September was a return to baseline, with one Facebook weekend on top.** The site recorded **1,227 pageviews from 605 visitors**, back to July's level after August's X-driven record. The underlying run rate outside the spike was **about 33 pageviews per day**, roughly half of August's clean window (62/day) and slightly below July (37/day). That suggests August's "clean" window was still carrying spillover from the X post, and the X audience did not stick. The bright spot was **September 19–21, when a Facebook share sent 125 visitors to the homepage**, producing 347 pageviews, 7 quiz starts, 3 diagnostic signups and 2 practitioner inquiries in three days. Practitioner inquiries held at a healthy **11 for the month**, all on an organic cadence. **Google referrals fell by half (214 → 110)**, the one trend in this report worth acting on.

Summary

Total Pageviews	Unique Visitors	Pages / Visitor	Bounce Rate
1,227	605	2.0	62%

Month-over-month

Month	Days	Pageviews	Visitors	PV / day	Bounce
May	31	1,047	475	34	63%
June	30	1,121	420	37	54%
July	31	1,224	590	39	60%
August	31	5,720	2,794	185	58%
August, clean window (Aug 8–31)	*24*	*1,494*	*738*	*62*	*60%*
September	30	**1,227**	**605**	**41**	**62%**
September excl. Facebook spike (Sep 19–21)	*27*	*880*	—	*33*	*63%*

The fair trend comparison is the bottom row against July: **33 pageviews per day in September versus 37 in July's clean window and 62 in August's.** Two readings fit the data:

- **August's clean window was inflated by the X post's long tail.** X visitors who bookmarked the site or came back later show up as direct traffic, which the August report could not separate out. September is the first month where that tail has fully faded.
- **Google fell at the same time** (see Traffic Sources). Some of August's Google traffic was very likely people searching "Proxima Health" after seeing the X post. That branded search also faded.

Bounce rate (62%) and pages per visitor (2.0) are both in their normal range. The audience that did arrive engaged the same way it has since June.

The September 19–21 Facebook weekend

Window	Pageviews	Visitors	Bounce	From Facebook	Quiz starts	Diag. signups	Practitioner inquiries
Sep 1–18	538	273	64%	9 pv	5	1	4
Sep 19–21 (spike)	**347**	**164**	**60%**	**125 pv**	**7**	**3**	**2**
Sep 22–30	342	168	61%	19 pv	7	6	5

- **Someone shared the homepage on Facebook on Saturday, September 19.** Facebook referrals went 48 → 61 → 16 pageviews over the three days and 94% landed on the homepage. 84% of Facebook-referred visitors were in the US, and the in-app Facebook browser was 15% of all September pageviews. This is a US consumer audience, the same profile as the X post at a smaller scale.
- **It converted.** Seven quiz starts in three days, versus five in the 18 days before it. Bounce held at 60%, in line with the site average, so the share reached people who were interested.
- **The other days above 50 pageviews** (Sep 1, Sep 15, Sep 18, Sep 23) had no single referrer behind them. They were ordinary weekday clusters of direct and Google traffic.

Top Pages

Page	Pageviews	% of Total	Visitors	Bounce Rate*
/ (Homepage)	559	46%	456	58%

Page	Pageviews	% of Total	Visitors	Bounce Rate*
/diagnostics	136	11%	116	28%
/interventions	132	11%	102	18%
/practitioners	106	9%	94	16%
/about	101	8%	82	20%
/science	81	7%	69	12%
/quiz	64	5%	60	18%
/terms	19	2%	18	—
/privacy	7	<1%	7	—
INUSpheresis booklet (PDF)	16	1%	3	—
Other (guessed URLs, / physicianagreement)	6	<1%	6	—

**Per-page bounce on the v2 methodology. The fair comparison is August's clean-window column (Aug 6–31): homepage 56%, /diagnostics 26%, /interventions 35%, /practitioners 21%, /about 18%, /science 18%, /quiz 12%.*

Key observations

- **The page mix went back to its pre-August shape.** /diagnostics and /interventions are again the leading content pages, as they were in July. /practitioners, which August's consumer audience pushed to the top, fell back to third.
- **/interventions bounce improved sharply (35% → 18%).** This is the page that received the "Papers on Inuspheresis" heading change, the 12 corrected paper links, the new Brain Health paper and Carlos Schuster's quote on September 9. The sample is small (102 visitors) but the direction is right: more people who land there keep reading.
- **The INUSpheresis booklet PDF was opened 16 times by 3 people.** It is a small number, but these are the deepest readers on the site, and the PDF has never shown up this clearly before.
- **The blog recorded zero pageviews.** It is still unlisted (no navigation link, no sitemap), so this is by design. One new post shipped in September (toluene exposure, Sep 3), bringing the unlisted library to roughly 70 posts.

- **Guessed URLs:** /contact, /pricing and /portfolio (one hit each). /contact has now been tried in two consecutive months.

Traffic Sources

Referrer	Pageviews	% of Total
Direct / No referrer	887	72%
Facebook (facebook.com, l., m., lm.)	153	12%
google.com	110	9%
longjourney.vc	17	1%
t.co (X / Twitter)	13	1%
bing.com	9	<1%
duckduckgo.com	8	<1%
linkedin.com	5	<1%
JotForm (form.jotform.com)	5	<1%
chatgpt.com	5	<1%
l.instagram.com	4	<1%
search.brave.com	3	<1%
SourceScrub (scrub.sourcescrub.com)	2	<1%
Microsoft Teams	2	<1%
Other (misc.)	4	<1%

Key observations

- **Google referrals halved: 110 pageviews from 103 visitors, down from 214 / 178 in August and below July's 167 / 142.** This is the first month-over-month decline in Google traffic since tracking began, and it breaks a four-month run of 20–30% monthly growth. The most likely explanation is that August's Google number included branded searches from the X audience: Google landings on the homepage, where a "Proxima Health" search lands, fell from 148 to 80. But landings on inner pages also halved (66 → 30), and September is below July, which predates the X post. A Google Search Console check of

query and ranking changes is the only way to know whether core rankings moved.

- **Facebook was the social channel this month: 153 pageviews from 140 visitors, 61% bounce.** In August it sent 9 pageviews. Like X in August, it was a single share rather than an ongoing channel: 82% of the month's Facebook traffic arrived on September 19–21.
- **X is gone.** t.co sent 13 pageviews (1,560 in August). No owned X activity followed the August spike.
- **longjourney.vc continues: 17 visitors across 12 separate days.** Same read as every month since April: a fund that keeps returning.
- **New investor-adjacent referrers: SourceScrub** (a deal-sourcing database used by private equity and growth funds, 2 visitors) and two links opened from **Microsoft Teams**, meaning someone shared the site inside an organization's chat. ChatGPT sent visitors again (2 visitors, 5 pageviews), up from one in August.
- **Direct traffic was 72% of pageviews**, between August (66%) and July (81%).

Geographic Breakdown

Country	Pageviews	Visitors	% of PV
United States	926	458	75%
Canada	52	21	4%
United Kingdom	41	21	3%
Greece	24	4	2%
Switzerland	20	5	2%
Singapore	19	19	2%
Sweden	15	5	1%
India	13	7	1%
Germany	12	5	1%
Romania	12	2	1%
Other (32 countries)	93	~58	8%

Key observations

- **US share rose to 75% of pageviews and 76% of visitors**, the highest since tracking began. With the international X audience gone and the Facebook share almost entirely American, the site's audience is now more concentrated in its target market than ever.
- **42 countries recorded a visit**, down from 88 in August and back near July's ~46.
- **Singapore: 19 visitors at exactly one page each**, spread evenly across the content pages. This is the same single-page crawler signature China showed in July and August. Not an audience.
- **Greece and Romania** are a handful of visitors reading many pages each (one Greek Windows visitor read 10 pages). Individual researchers, not a trend.
- **Canada and the UK** remain the #2 and #3 audiences at roughly 20 visitors each, close to their pre-August levels.

Device & Technology

Device Type

Type	Pageviews	%
Desktop	652	53%
Mobile	553	45%
Tablet	18	1%

Browser

Browser	Pageviews	%
Chrome (Desktop)	481	39%
Mobile Safari	230	19%
Facebook in-app browser	185	15%
Safari (Desktop)	89	7%
Chrome Mobile iOS	57	5%
Chrome Mobile (Android)	53	4%
Microsoft Edge	51	4%

Browser	Pageviews	%
Firefox (all platforms)	26	2%
Opera (all platforms)	14	1%
X / Twitter in-app	13	1%
Other (Instagram, Google app, Brave, Samsung)	22	2%

Operating System

OS	Pageviews	%
iOS	486	40%
macOS	365	30%
Windows	261	21%
Android	85	7%
GNU/Linux	21	2%
Chrome OS	7	1%

- **Mobile was 45% for the month but only 32–37% outside the Facebook weekend.** The Facebook spike was 72% mobile. The underlying audience is drifting back toward desktop (July: 25% mobile), so August's "half the audience is on phones" finding was driven by social traffic. Mobile still matters whenever a share happens, which is when the most new visitors arrive.
- **iOS was 40% of pageviews**, again mostly the Facebook audience. Android stays small (7%).
- **Windows rose to 21%** (13% in August), consistent with the return of the desktop practitioner and professional audience.

Practitioner inquiries: steady

Month	Submissions	Days with a submission
July	9	~9
August	28	16
September	**11**	**8**

Eleven inquiries on eight separate days (Sep 3, 9, 15, 19, 20, 25, 26, 29). The busiest day was September 25 with three, submitted at three different times of day (roughly 01:00, 14:00 and 22:00 UTC), which is a normal human pattern. No bot signature. Relative to traffic, this is a strong month: 11 inquiries from 605 visitors is 1.8%, versus 1.0% in August and 1.5% in July.

Diagnostic Quiz funnel

Stage	Unique Visitors	Rate
Quiz started	18	—
Quiz completed	14	78% complete
Email submitted	6	43% of completers

Stage	Unique Visitors	Rate
Email skipped	8	57% of completers

Diagnostics signup

Month	/diagnostics visitors	Signups (unique)	Signup rate
August	409	52	13%
September	**116**	**9**	**8%**

The diagnostics signup form lives on the /diagnostics page, not inside the quiz. Earlier reports listed it as the last stage of the quiz funnel; from this report on it is shown separately, measured against /diagnostics visitors.

- **Quiz completion is steady at 78%** (81% in August). Once people start, they finish.
- **Email capture got worse: 6 submitted, 8 skipped.** For the second month running, fewer than half of completers leave an email. At September's volume the email screen costs about one contact for every two completed assessments.
- **Quiz starts were 18**, double July (9) but a fraction of August. The quiz still has no link from /diagnostics, the page most likely to send it qualified visitors (116 visitors in September).
- **Diagnostics signups: 9 people, 8% of /diagnostics visitors**, three of them during the Facebook weekend.

Follow-up on August's recommendations

1. **Find the August 4 post and do it again.** No follow-up social activity is visible. t.co referrals fell to 13. The September Facebook share was organic, not a planned post.
2. **Ship the quiz routing experiment.** Not shipped. /diagnostics still has no quiz link. Fifth month recommended.
3. **Fix the quiz email screen.** Not shipped. Email capture dropped below half of completers.
4. **Design for mobile first.** Partly superseded. Outside social spikes the audience is two-thirds desktop again. Mobile still matters during spikes, which is when the most new visitors arrive.
5. **Give consumers their own door.** Not shipped. /contact was tried again.

6. **Repeat the LinkedIn post monthly.** No LinkedIn spike in September (5 referrals).
7. **Check the practitioner-onboarding pipeline.** /physicianagreement drew 1 view; JotForm referrals held at 5. No change visible from the analytics side.
8. **Keep the search engine running.** This is the item that went backwards: Google referrals halved. Blog still unlisted.

The site changes that did ship in September (Interventions heading, 12 paper links, the new Brain Health paper, quote moves) were client-requested content fixes, and /interventions engagement improved after them.

Recommendations for October

1. **Pull Google Search Console for August and September.** Google halving is the most important number in this report. Search Console shows whether core rankings fell or whether August's branded searches simply faded. That decides whether anything needs fixing.
2. **Decide on the blog.** About 70 posts are written and unlisted. If Search Console shows rankings slipping, listing the blog (navigation link plus sitemap) is the single biggest search lever available.
3. **Ship the quiz routing experiment.** Add a quiz CTA to /diagnostics. The quiz converts and the traffic is there. The missing piece is the link.
4. **Fix the quiz email screen.** The same recommendation as August, now more pressing: fewer than half of completers leave an email.
5. **Plan the next share instead of waiting for one.** Two months in a row, a single social share (X in August, Facebook in September) was the month's biggest traffic event, and both converted. A planned monthly post with UTM-tagged links on X, Facebook or LinkedIn turns that into a repeatable channel.
6. **Keep calling on the investor signals.** Long Journey (12 days in September), SourceScrub, and links shared over Microsoft Teams all point to the site being passed around in investor circles.
